TIPS FOR
PRESENTING YOURSELF
ON WEB CAM

1

Put camera at eye level

Move your webcam to a spot that centers your face on screen instead of looking down to it.

2

Place lighting in front

Have a light source in front of you instead of to the side or behind you.

3

Place appropriate items in the background

Be aware of what's in view of the camera. Have appropriate items of interest that do not distract.

4

Position yourself at the correct distance

Sit far enough away from the camera so that your shoulders are visible.
